PSS ENTERS INTO SUPPLY AND SERVICE CONTRACT
WITH ARUP LABORATORIES

PSS has entered into a supply and service contract with ARUP Laboratories, located in Salt Lake City, Utah, USA, for PSS products (i.e., instruments, consumables, and reagents). ARUP, established in 1984 by the Department of Pathology at the University of Utah, is the largest single-site reference laboratory in the world and the third largest reference laboratory in the United States.

PSS USA, Inc. is collaborating with ARUP to enter into the U.S. diagnostic market by introducing the SX-96GC, a high throughput instrument for multiple aspects of the diagnostic testing segment. All extraction processes use PSS Magtration® technology and its reagent. The high throughput platform, the SX-96GC, has been installed at ARUP and validated for DNA isolation and reaction set-up in front of real-time PCR as well as SNP detection. The Molecular Genetics Laboratory at ARUP processes 10,000 samples monthly for clinical diagnostic applications.

ARUP Laboratories is a national clinical and anatomic pathology reference laboratory and an enterprise of the University of Utah and its Department of Pathology. ARUP offers over 2,000 tests and test combinations, ranging from routine screening tests to highly esoteric molecular and genetic assays, for patients nationwide. ARUP is a worldwide leader in innovative laboratory research and development.

Further information on ARUP Laboratories can be found at
www.aruplab.com.
